1) JAVA: https://github.com/qweOkk/CSC1004-Java-Java-Movie-Management-System.git
2) Python: https://github.com/qweOkk/CSC1004-Python-Image-Classification.git

1. Schedule

The title of Java project is "Java Movie Management System". I am going to implement the features including:

  1) User and Manager Systems
 2) Login System
 3) Java GUI

  To reach this goal, I make the following schedule (which can be consistently update in each report).

 • **Week 1 and week 2**:Learning something important about Java FX.
 • **Week 3 and week 4**:Using what I have learned to finish the framework of Login System.
 • **Week 5 and week 6**:Learning more about Java FX and make Login System more complete.
……
 • **Week 11 and week** 12:Submit the python and java projects.

2. Progress Report

Java Project(10% finished):
Completed features:
1) framework of Login System.
Features to be added:
1)User and Manager Systems
2) Java GUI

……

Python Project(5% finished):
Completed features:
Nothing but Having read the project.
Features to be added:
Everything.

3. Works finished in the past two weeks

Java: I learned much about java FX through watching videos on bilibili and read some articles. Moreover, I read some example projects of Java FX.
Then, I finished the framework of the Login System and have the main idea of how to write the user and manager systems.
Python: I read the codes and have the simple idea of how to complete it. Moreover, I learned something about Pytorch.

4. Works to be done in the following two weeks

I will complete the Login System and learn more about Java FX.I will begin to learn MySQL and begin the User and Manager System.
